

CRM Bitrix24 & TimeDoctor Integration

Possibilities of integration:

1. When creating a task in Bitrix24 (hereinafter referred to as B24), a similar task is created in the TimeDoctor system (hereinafter referred to as TD). Responsible (performer and co-performers) for task execution in TD is assigned to employees with the same email address as in B24. If such employee is not found, the task will not be sent to TD.
2. When adding a task to B24 group, a project with the same name will be created in TD. All tasks in the group come in the appropriate project. If the task is without a group, a default project will be created (set in the application settings).
3. When moving B24 task into/from the group, the similar manipulations will be carried out in TD.
4. When the task is completed in B24, the task status changes to inactive in TD. After resumption it returns to work.
5. When deleting B24 task, the corresponding task in TD becomes inactive.
6. At certain time intervals (once every 15 minutes for a flowing moment), a request will be made to TD to obtain time logs. The resulting time will be set as spent on each task in B24 to the corresponding user.

Instruction of the integration setup:

1. Install application from marketplace.
2. Go to the TD application settings at <https://login.timedoctor.com/app> and create a new integration. Fill the field **Redirect URL** we enter the following: **https://apps.devplace.info/avivi.timedoctor/td_manager.php?domain=#PORTAL_URL#**, where **#PORTAL_URL#** - address of your portal without https://, for example: avivi.bitrix24.ru.

Edit Application [← Back to Your Apps](#)

About Your Application

We show customers this information when we ask them to authorize integration with your application.

About your application
ie. "My Awesome App"

Your company's name
ie. "My App Company"

Your app icon No file chosen

OAuth 2 Authorization

When you request Basecamp ID authorization, we ask the user whether to grant or deny access. We redirect back to this predetermined application URL with the user's response. See the OAuth 2 spec for guidance. If you haven't implemented this in your app yet, enter the URL you expect to use. You can update it later.

Redirect URL X
ie. "https://example.com/auth"
[add new uri](#)

[or Cancel](#)

3. After creation, we obtain ClientId and SecretKey.

Secret Key: 2olasnjynv6s88gcw40wsck0o0wow44cgg8gsksoock0ww0s0k

Redirect URL: https://apps.devplace.info/avivi.timedoctor/td_nager.php?domain=poberejniy.bitrix24.ua

[Preview authorization dialog](#)

4. Go to the page of the B24 application and continue to configure. Fill in the data obtained at the last step. Set default project name in TD for B24 tasks without project/group. Be sure to indicate your time zone, otherwise the default time zone will be set (Europe/Kiev), which may lead to incorrect time import.

"Time Doctor" Integration Application settings

Enter "Client Id" and "Secret Key" from "Time Doctor" dashboard integration settings

1444_5ubid2uxe5s8c8ows08sowwwck8wo8s40ckoc4s0ks4ws0w0ck
2olasnjynv6s88gcw40wsck0o0wow44cgg8gsksook0ww0s0k

Enter default "Time Doctor" project name

B24 tasks

Select your time zone

(UTC+00:00) Europe/London ▼ 11/20/2018, 10:01:54 AM

SAVE SETTINGS

5. After saving the settings, you must complete the integration on the TD application settings page. Click the **Preview authorization dialog** and confirm access.

Allow access?

B24 integration is asking for access to your Time Doctor account. We need to make sure this is OK with you.

Time Doctor

Yes, I'll allow access

[No thanks, take me back](#)

- Now all your TD users who will use the integration need to go over a link to activate the application. On the TD application setup page, right click the **Preview authorization dialog** and copy the link.

All users, who clicked the link, need to perform actions similar to clause 5.

- Setup is completed. If everything is done correctly, a section will appear with the name of your TD application in the desktop application. All tasks created in B24 will be included in it.
